

HELIOS Eco-Tariffs

What Is an ECO-Tariff?

Simply put, an 'ECO-Tariff' allows a car park operator to reward drivers of environmentally friendly vehicles with lower charges.

How do ECO-Tariffs work?

When a customer purchases a ticket from a 'Helios' pay and display machine, they are required to select the type of vehicle they drive. Helios then knows how much to charge and the customer makes a payment accordingly.

How different ECO-tariffs can Helios support?

Helios can support up to 10 different vehicle types allowing ample flexibility.

Purchasing a ticket
